

 FOUR POINT — CYBER CONSULTING —	Project Change Request (PCR)	Client	Design World
		Doc #	FPCC-PCR-002
		Rev. #	Rev 1
Effective Date	06/08/26		

Summary Description

The proposed change will harden the Design World Windows Server 2022 File Server, DW-FS-OL-1, by applying missing security updates, enforcing SMB signing, disabling legacy authentication, and restricting insecure file sharing. These changes are intended to protect sensitive file storage and reduce the risk of unauthorized access to Design World data.

Proposed Change

1. Patch Application and Security Update Installation

- a. Apply missing Windows Server 2022 security updates.
- b. Verify successful patch installation.
- c. Reboot during the approved maintenance window if required.

2. SMB and Authentication Hardening

- a. Enable SMB signing for server and client communication.
- b. Disable LM and NTLMv1 authentication
- c. Enforce stronger authentication methods.

3. File Share and NFS Restriction

- a. Review file share permissions.
- b. Restrict world-readable NFS shares to authorized users and hosts.
- c. Confirm that sensitive file storage is not exposed to unauthorized users.

Reason for Change

The File Server stores and supports access to Design World's sensitive business and design data. Weak SMB settings, legacy authentication, missing security updates, and world-readable file sharing could allow credential attacks, unauthorized file access, or data exposure. This change is necessary to improve the confidentiality and integrity of Design World's stored information.

			Doc #	FPCC-PCR-002
Effective Date	06/08/26		Rev. #	Rev 1

Impact Analysis

Expected Benefits

1. **Improved Data Protection:** Restricted file sharing will reduce the risk of unauthorized access to sensitive files.
2. **Reduced SMB Attack Risk:** Enforcing SMB signing will help protect against SMB relay and man-in-the-middle attacks.
3. **Improved Patch Compliance:** Applying missing updates will reduce exposure to known vulnerabilities.

Potential Risks and Mitigations

The proposed changes may temporarily affect file access or compatibility with systems using older authentication methods. To reduce operational impact, changes will be implemented during an approved change window. File access will be tested after implementation, and previous configuration settings will be documented for rollback if needed.
