Structura AI Operational Flow Diagram

Diagram information

This diagram outlines the operational flow of Structura AI, detailing the interaction between various components such as Identity & Edge Defense, Orchestration Layer, Inference & Execution, and Response Delivery. Key components include VPN, Cloud WAF, Orchestrator, Local Vector Database, and various tools for execution and synthesis. The diagram illustrates how data and commands flow through the system, ensuring secure and efficient processing.

Structura AI Operational Flow SOP

- Begin with the Identity & Edge Defense.
 - Connect via VPN.
 - Authenticate using SSO and MFA.
 - Pass through Cloud WAF.
- Navigate to the Design World Engineer Browser.
- Move to the Orchestration Layer.
 - Query the Local Vector Database using the Orchestrator.
 - Process User and RAG inputs with the local LLM.
 - Use Service Account Credentials for file access.
 - Fetch engineering data from the Windows File Server.
- Authenticate Service Account Credentials to the File Server.
- Proceed to the Inference & Execution - Action Layer.
 - Send emails via the Internal SMTP Relay.
 - Execute commands using the Shell Tool.
 - Write reports and summaries to the File Tool.
 - Use the Tool Execution Host for executing tools.
- Write artifacts via the service account.
- Move to the Response Delivery stage.
 - Generate final message in Final Synthesis.
 - Return response to Cloud WAF.
- Validate session and inspect payload.
- Run results on Ubuntu within the Business Subnet.
- Store artifacts on the File Server.
